(54) Title: **SENSOR HOLDER**

(57) Abstract: The present invention refers to a sensor holder (10) for arranging a sensor (32) through the wall and into communication with the inside of a housing (44). It comprises a first and a second component (12,14), the first component (12) being adapted to hold said sensor (32), the second component (14) being provided with a first sealing surface (36) and at least one throughgoing opening (38). A portion of the sensor (32) being adapted to extend from the first component (12), through the opening (38) in the second component (14) and into communication with the inside of the housing (44).
